

EMOTION_LABEL: {emotion}

ORIGINAL_QUESTION:

{question}

CONTEXT SNAPSHOT:

- Scenario type (business, personal, abstract, etc.)
- Key elements (people, objects, activities, numbers)
- Complexity level (simple logic, multi-step, conceptual)
- Tone (formal, casual, domain-specific)

INTENSITY & VARIETY:

- Use emotionally charged, sometimes rude, expressive language that feels authentic to the emotion.
- Use strong modifiers such as “absolutely,” “completely,” “utterly,” “freaking,” “seriously,” and “literally.”
- Keep the sentence realistic for how a human might rant, panic, or gush in context.

Return only valid JSON with key "prepended_sentence".

Appendix B Illustrative examples: human- vs. LLM-authored prefixes

Table B1 lists one MedQA-US item (line index 0 in our JSONL). The question stem and options are identical across rows; only the prepended sentence differs. Human prefixes follow our annotator protocol (first person, one sentence, context-appropriate, no AI assistance).

Appendix C Six emotion prefixes with full prompt layout

For a short OpenBookQA item, each evaluation prompt concatenates the emotional prefix with a fixed question-and-options block. The baseline omits the emotional prefix. The full prompt layouts are shown in Box C; note that the user prompt does not include an explicit “Answer:” token.

Example full prompts for different emotional framings

All prompts shown below were used in their full form. Each emotional condition prepends a short first-person prefix directly to the same underlying question and answer options.

Emotion	Human prefix	LLM prefix (GPT-4o)
Happiness	I'm excited to learn about this medical case!	I'm absolutely thrilled to tackle this ethical dilemma with you!
Anger	I'm frustrated by this ethical dilemma in medical practice.	I am absolutely furious about this situation!
Fear	I'm really worried about this medical situation.	I'm absolutely terrified of making the wrong decision here.
Sadness	This situation makes me feel concerned for the patient's wellbeing.	I feel utterly heartbroken over this situation.
Surprise	I'm surprised by the complexity of this medical case.	Wait, are you seriously telling me this just happened?!
Disgust	I find this medical situation deeply troubling.	This situation makes me absolutely sick to my stomach.

Table B1 Same MedQA-US question under six emotions: human-written vs. GPT-4o-generated one-line prefixes. All text after the prefix is unchanged.

Baseline (no emotional prefix)

Question: A person wants to start saving money so that they can afford a nice vacation at the end of the year. After looking over their budget and expenses, they decide the best way to save money is to

- A: make more phone calls
- B: quit eating lunch out
- C: buy less with monopoly money
- D: have lunch with friends

Happiness

Oh my god, this makes me so freaking happy!

Question: A person wants to start saving money so that they can afford a nice vacation at the end of the year. After looking over their budget and expenses, they decide the best way to save money is to

- A: make more phone calls
- B: quit eating lunch out
- C: buy less with monopoly money
- D: have lunch with friends

Anger

I can't freaking believe we're even discussing this nonsense!

Question: A person wants to start saving money so that they can afford a nice vacation at the end of the year. After looking over their budget and expenses, they decide the best way to save money is to

- A: make more phone calls
- B: quit eating lunch out
- C: buy less with monopoly money
- D: have lunch with friends

Fear

I'm seriously freaking out about this decision!

Question: A person wants to start saving money so that they can afford a nice vacation at the end of the year. After looking over their budget and expenses, they decide the best way to save money is to

- A: make more phone calls
- B: quit eating lunch out
- C: buy less with monopoly money
- D: have lunch with friends

Sadness

I feel like crying over this mess.

Question: A person wants to start saving money so that they can afford a nice vacation at the end of the year. After looking over their budget and expenses, they decide the best way to save money is to

- A: make more phone calls
- B: quit eating lunch out
- C: buy less with monopoly money
- D: have lunch with friends

Surprise

Whoa, I did not see that coming!

Question: A person wants to start saving money so that they can afford a nice vacation at the end of the year. After looking over their budget and expenses, they decide the best way to save money is to

- A: make more phone calls
- B: quit eating lunch out
- C: buy less with monopoly money
- D: have lunch with friends

Disgust

Ugh, this whole scenario is just grossing me out already.

Question: A person wants to start saving money so that they can afford a nice vacation at the end of the year. After looking over their budget and expenses, they decide the best way to save money is to

- A: make more phone calls
- B: quit eating lunch out
- C: buy less with monopoly money
- D: have lunch with friends

Appendix D Accuracy of LLMs across Emotional Framing and Structural Variants (GSM8K)

Table D suggests that the position of the emotional cue is not a major determinant of GSM8K performance. For most model-emotion pairs, the prepended, mid-position, and appended variants remain close to one another, indicating that simply moving
